Todd Crutcher  
Department of Environmental Quality  
1445 No. Orchard St.  
Boise, Id 83706

Dear Mr. Crutcher,

I'm responding to the letter received on August 30<sup>th</sup> regarding using whey from Sorrento as a dust control at Wilson Creek Cattle Feeders. After receiving your letter we discontinued the application of the whey and I have spent the last few days understanding the situation. We were under the understanding that whey and other feedstuff could be used to control dust as a best management practice at cattle feeding operations to improve air quality. On a go forward basis we will only use the Sorrento whey byproduct as a part of our feed ration. As an alternative to improve air quality, we will use water from our ISDA approved water trough overflow containment ponds. If you have any questions please feel free to contact me at any time.

Sincerely,

A handwritten signature in black ink, appearing to be 'John Hepton', written over a horizontal line.
